

Call for Papers: the 2nd ICoBio 2017

[Call for Papers](#)

Our knowledge in biology has allowed us to achieve better understanding on many biological phenomena from its application within agriculture, fishery, food security and safety, industry, medic, to environmental ecosystem and conservation. However, our advances in applied biology also generate some negative implications, such as diminishing biodiversity, Imbalance in food resources, evolving novel infectious agents, and the lack of understanding of non-infectious diseases or metabolic disorders.

The good news is that the emerging cross-disciplinary sciences, such as molecular biology, bioinformatics, and bio-nano technology are useful tools to help us in creating a better world. These interdisciplinary sciences will not only allow us to advance in sustainable food and energy security, healthcare, and environment using the knowledge of gene, the blueprints of life, to sustain the ecosystem biodiversity.

In this 2nd International Conference on Biosciences, we aim “the insights on current trends in biology research from genes to ecosystems to foster the networking among biologists and relevant stakeholders to accelerate our effort in understanding biological phenomena and their applications for human welfare”.

It is a matter of great privilege for us to invite you to contribute a research paper and participate in the deliberations of the conference.

We look forward to welcoming you at Bogor, the home of Bogor Agricultural University.
